Comments on the course.

The course had a lot to cover in terms of material and I felt that it was often difficult to remember so many things when you initially learn something and then later learn about something else and have to connect it to each other. Sometimes I was able to tie material back to each other and other times it is so much information that it is hard to recall.

Comments on the teaching assistant.

I feel that the teaching assistant was not really of any much assistance to any of the students this quarter. Aside from helping the Professor with administrative business and chiming in a couple of times throughout the quarter about the material, I feel that she was very much uninvolved. She was nice but overall did not seem approachable or willing to help outside of the times students would have to approach her, etc.

Comments on the course.

the way this course is taught it seems to not be for non-science majors (compared to npb 10 for non-science majors which made me really consider being taking npb seriously, which is why i was super excited for npb 12) to much was expected when all most of us have is a basic bio, chem background. (maybe its just me but even that education was shit, excuse my language, public school where 90% of families were below the poverty line, teachers don't care and yes i understand that because of that i need to work harder and study more, which i do, which is why i take non-science major courses because science is not my strength. >> this comment because of a comment you made earlier in the course about us not learning things in high school, some of us didn't have the best options, educated parents or families to help, we try our hardest.)

Comments on the course.

I understand this is a college course, but the material was explained too quickly. I wished we would have learned more extensively about the first part of class because it was the foundation of the course. A majority of the students misunderstood a lot of the course material because they did not get a concrete understanding of the basics.

You need to realize that these kids don't have prior biology knowledge. The study guides aren't helpful at all, the tests are so much harder. You need to go slower and be clearer on what you want from us.

Comments on the course.

Overall, really interesting course, but very difficult to follow sometimes. Going into this course, I did not expect to focus so much on the processes in the nervous system, but thought we were going to discuss diseases for the main part. The majority of the exams are based on understanding the processes, so if you do not understand that, you will not do well in the class. With this, I really struggle because the processes are very precise and a lot of information. However, very interesting class.

Comments on the teaching assistant.

Should be more involved around the classroom.

Evaluation for Human Brain and Disease (NPB 012) - Spring Quarter 2017

Comments on the course.

This course was extremely difficult. The description was a GE course for non-science majors, yet me and all others I consulted with about this course had tremendous difficulty with almost everything covered in the course.

The following responses apply to Lauren Fink (Teaching Assistant) only.

Comments on the teaching assistant.

I never interacted with the TA so I have no opinion on her methods.
